PROFILE

Computer science graduate (2025) with three years of hands-on fintech research and product work. Turned 1,000+ customer interviews and a close reading of RBI's KYC rules into a payments model that reached NPCI. Comfortable doing the analysis end to end: framing the question, gathering the data, building the tooling in Python, SQL and TypeScript, and turning findings into product decisions.

EXPERIENCE

May 2025 – Dec 2025
8 months

ZashIt · Founder & Builder

Credit card recommendation engine · zashit.live

- Designed a recommendation engine that reads users' real spending patterns (statement OCR) and ranks cards by expected rewards, surfacing the top 2 for each user.
- Ran one-to-one credit card consulting for high-earning professionals (HENRYs) alongside the product, using each session to refine the matching logic.
- Launched a public waitlist and the supporting analysis on how spending mix determines the right card portfolio.

Sep 2023 – Nov 2023
3 months · remote

FINT · Software Engineer Intern

Fintech · production engineering

- Shipped production code in an unfamiliar fintech codebase within a 3-month remote internship, ramping quickly on existing systems and conventions.

Sep 2022 – Jun 2023
10 months · full-time

ForeignerPay · Founder, Research & Product Lead

UPI access for foreign tourists in India

- Identified why foreign tourists cannot pay digitally in India and sized the problem through **1,000+** structured customer interviews with tourists.
- Analysed RBI's Master Direction on KYC and prepaid instruments; identified the ₹20,000 wallet provision as a compliant path for non-resident users.
- Built a working UPI / PPI payment model on that finding and presented it to NPCI. The model became the basis for one of the first two non-bank UPI providers authorised to serve foreign nationals.

SELECTED PROJECTS

ValidateIdea `454 reports in first 7 days`

AI-generated validation reports for early-stage founders: automated market research, competitor analysis and go-to-market strategy. Guided prompts sharpen the inputs so the analysis is only as vague as the founder lets it be.

Sneaker Sage `Live price signal`

ANALYSIS

Research
Customer interviews (1,000+), market sizing, competitor analysis, GTM strategy

Regulatory & payments
RBI KYC and PPI rules, UPI, NPCI, credit card rewards economics

Modelling
Spending-pattern analysis, recommendation logic, price prediction

DATA & TOOLING

Languages
Python, SQL, TypeScript, JavaScript

Data stores
PostgreSQL, Supabase, MongoDB

AI tooling
RAG pipelines, LangChain, AI agents, OCR

Building
Next.js, React, Node / Express, React Native, Vercel

EDUCATION

BTech, Computer Science
Inderprastha Engineering College
Nov 2021 – Sep 2025
